

T2GO Portable CFME

Our new generation T2GO Continuous Friction Measuring Equipment measures friction on any surface – both dry and contaminated – in areas where large trailer or vehicle-based friction testers can't go. It is now even more precise and more portable thanks to an upgraded design and new features.

Our new generation T2GO. More portable and precise than ever!

- New design and case makes it easier to collapse and transport
- Now measures every 30 millimetres or 1/10 ft for more precise results
- Measures according to established standards including ASTM and EN
- Includes calibration equipment for quick, easy calibration in under five minutes
- Optional integrated water system enables functional measuring of simulated wet conditions

COMPLETELY AUTOMATED OPERATING SYSTEM

The T2GO Computer System was designed with many criteria's in mind, but to be as user friendly as possible was the primary objective. This has resulted in an operating system that is unmatched in its industry. The onboard computer is used when operating the T2GO, and is completely automated.

- Automatically collects and stores more data in PC tablet:
 - Friction data
 - Air and ground temperature
 - Humidity
 - GPS position at start and stop points
- Presents data in tables, graphs and colour-coordinated Google maps

OPTIMAL PORTABLE FRICTION MEASUREMENT FOR:

- Accident investigation by police and insurance companies
- High friction areas such as crosswalks, bus stops and roundabouts
- Controlling friction levels in winter, e.g. on sidewalks
- Airports – both landside and airside
- Road markings (EN1436)
- Helidecks (CAP 437)
- Racing circuits
- Factory floors
- Oil platforms
- Cargo boats
